

# MPLS IPsec Advanced

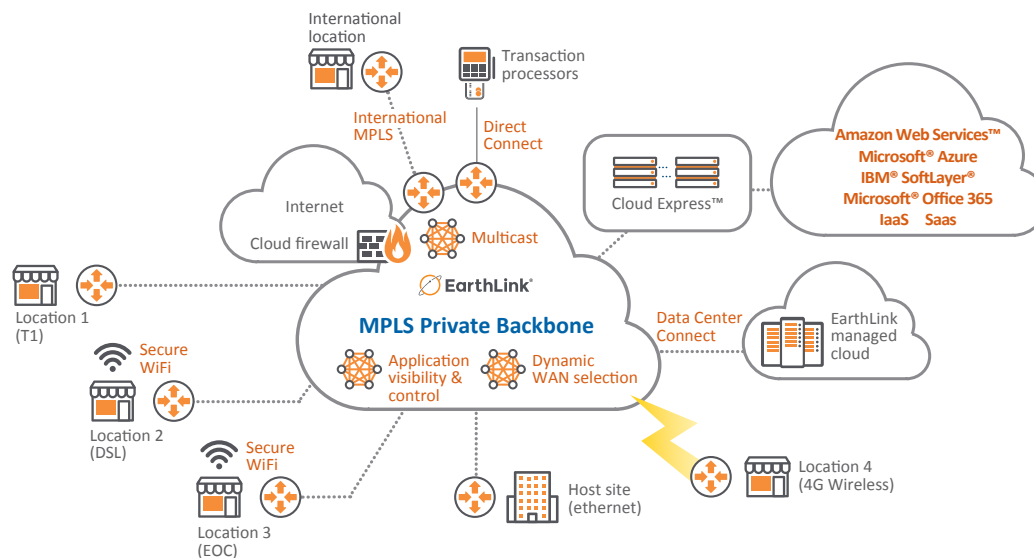

## Secure connections to your MPLS network

Businesses require the flexibility to configure their private networks to efficiently optimize bandwidth. MPLS IPsec Advanced enables businesses to use Internet access from any location to securely connect to their MPLS network.

With MPLS IPsec Advanced, data is encrypted and authenticated for secure connectivity and PCI compliance over any Internet connection, creating a secure transmission

tunnel between the Customer Premises Equipment and the network router. EarthLink manages the network IPsec aggregation element, which simplifies private network connectivity management and makes it more cost effective.

MPLS IPsec Advanced options include advanced firewall capabilities, high availability, and back-up includes wireless.

### Features

- Supports Ethernet, DS3, T1, Cable, Wireless Data, DSL and customer provided access
- Supports bandwidths up to 300 Mbps
- Fully Managed CPE
- PCI Compliant
- Intrusion Detection/Prevention
- Unified Threat Management
- BYOA or EarthLink provided Internet access
- High Availability and backup options include wireless

### Benefits

- Increase network reliability
- Reduce WAN access costs
- Protect your brand
- Lower your management burden
